

The Network Hub for Atlantic Canada-US-EuropeSM

Fibre Centre is the premier network-neutral colocation facility in Atlantic Canada and hosts various network operators including enterprise and government customers.

Fibre Centre is strategically positioned on the crossroads of major fibre routes intersecting Canada, the United States and Europe. Fibre Centre is the closest neutral colocation facility in North America to Europe, located in the geographic middle between major US, Canadian and European markets, providing a perfect location for data logistics.

Fibre Centre is truly neutral and does not compete with any of its customers. Fibre Centre works closely with regional and global providers to help facilitate synergistic ecosystem of offerings in its facilities.

The two major benefits in using Fibre Centre for your needs would be substantial savings and valuable infrastructure enhancements.

Fibre Centre's 2N and N+1 colocation space and Meet Me Room provides high security, 24/7 access and Smart Hands services.

Shared and neutral colocation environment allows for cost savings, flexible terms and future-ready expansion opportunities. As an example, customers at FC can leverage an IP Transit (public Internet) connection from as low as \$0.30 USD per megabit per second with access to virtually unlimited internet capacity.

PRODUCTS

- Fibre Centre provides physical layer colocation space, protected power and neutral-interconnection capabilities.
- Colocation is offered as half and full locking cabinets as well as Rack Units for individual patch panels for cross connects.
- Protected Power is offered for both AC 110v as well as -48v DC with generator back-up.
- Cross Connects between network patch panels are provided within the Fibre Centre Meet Me Area and are installed by Fibre Centre technicians for a one-time only fee. There are no monthly recurring fees for individual cross connects within Fibre Centre.
- Fibre Centre is a 24x7 secure access facility with technical support available on-site and on call.
